

Mini AlphaMop™ System

Polyester mop for hard-to-reach areas

Description

The ITW Texwipe Mini AlphaMop™ System is designed to facilitate cleaning in hard-to-reach areas of a cleanroom. The mop covers are made of the same material as ITW Texwipe's state-of-the-art polyester AlphaWipe® wipers, for effective cleaning and low contamination. Mop covers are also available in our TechniCloth® nonwoven substrate.

The mop (3.7" x 7.1", 9.4 cm x 18 cm) has a low, flat profile and slightly rounded corners. The swivel joint allows a user to reach even the most inaccessible areas. The telescoping handle extends from 2 feet 5 inches to 4 feet 5 inches, and is easily used with just one hand. Changing the mop covers is quick and easy — they are designed to slip on and off, yet remain secure while in use.

Features

- Laundered 100% knitted-polyester or nonwoven TechniCloth mop cover material
- Low profile, swivel head design
- Rounded corners
- No exposed seams
- Rapid-change configuration
- Bag-within-a-bag® cleanroom packaging

Benefits

- Ultralow particle generation and extractables
- Superior strength against abrasion
- Strong and lightweight
- Easily used in hard-to-access areas
- Quickly and easily changed mop covers
- Excellent durability with low contamination
- Handle telescopes from 2' 5" to 4' 5"

Applications

- Superior for accessing inaccessible areas that need to be cleaned
- Small rectangular profile with rounded corners
- Excellent for laminar hoods and non-sterile isolators
