

GammaGuard® CE

Sterile lint-free garments made of a comfortable fabric with a superior liquid and particulate barrier.

All GammaGuard CE® garments are individually packaged and sterilized to a 10⁻⁶ sterility assurance level (SAL). This helps prevent workplace contamination and cross contamination of products or materials. Non-linting fabric helps reduce the release of unwanted particulates, while tunnelized elastic also contains particle shed.

Benefits

In a cleanroom environment, maintaining sterility is critical to keeping your processes and materials uncontaminated. GammaGuard® CE cleanroom apparel is designed with varying levels of protection to help keep you safe based on your cleanroom standards.

All garments and clean room suits are clean processed using the Sterile-Don™ packaging process, meaning all loose particles have been removed from the clothing before packaging. Better yet, the tear-resistant and breathable fabric keeps you cool over long hours.

Bound Seams

Tunnelized Elastic

Sterility Assurance

Raise your Standards
Our cleanroom clothing is made in an ISO-certified facility. All garments are sterilized to a 10^{-6} SAL.

Trust the Process
Sterile-Don™ packaging protects against contamination during donning.

Quality Assurance
A certificate of sterility is included in each case.

Tear-resistant fabric
Our proprietary fabric is tear-resistant and keeps you cooler than competitive fabrics.

Decrease Particle Shed
Tunnelized elastic is encapsulated to capture particle shed and eliminate raw edges that can generate particulates.

Bound Seams are Strong Seams
A reinforced outer binding is tightly sewn over each seam to strengthen it and to eliminate raw edges that can generate particulates.
