ABOUT INTERNATIONAL ENVIROGUARD

Our Story

International Enviroguard designs and manufactures an extensive assortment of disposable protective clothing and other products for a wide array of industries. We deliver Comfortable Confidence™ to safeguard what matters most. We protect your people, productivity and operations with disposable products that fit your operation, your budget and your needs.

We create a more comfortable workday.

Comfort matters in the workplace. Our disposable protective products shield your team from pathogens, contaminants and grime while preserving the comfortable dexterity they need to do their jobs with confidence. We use innovative materials designed for worker comfort. Products are produced to meet ANSI sizing standards for a better fit, greater mobility and fewer rip-outs.

We know protection.

We are the industry's go-to supplier after a crisis. Our expertise in assessing protective needs and then rapidly delivering has kept essential teams safe after floods, hurricane cleanups, oil spills and highly contagious infectious disease outbreaks. Our ability to quickly identify and deliver the best protection for the job extends beyond our disaster-response work to our entire operation.

We innovate a better experience.

We are passionate about safeguarding what matters through innovation. Design thinking, flexible operations and an empowered culture drive our team to continually identify and solve new challenges. We engineer comfort and productivity into every stitch to create better-fitting disposable clothing, cooler fabrics, advanced protection and wearer-driven product features.

We deliver affordable confidence.

We provide engineered protection for the best total cost in use. Our comfortable fit, performance and quality enable you to reduce product waste through fewer rip-outs and increase safety through better worker compliance. We deliver more than products. We give you the power to enhance protection and improve productivity while reducing your total costs.

LIGHTWEIGHT PROTECTION FOR NON-HAZARDOUS ENVIRONMENTS

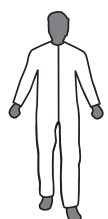

Polypropylene offers economical protection against dust, dirt, grime, and particulates in non-hazardous environments.

Breathable, lightweight fabric helps keep wearers cool by not trapping heat next to the body. Recommended applications include food processing, construction, pharmaceuticals, environmental cleanup, and more.

- Low-cost protection against dirt and grime.
- Lightweight, breathable fabric keeps wearers cool
- Latex-free
- Low-cost solution for protecting workers against dirt and grime
- Polypropylene is appropriate for wear in non-hazardous environments

SUPERIOR LIQUID & PARTICLE PROTECTION

MicroGuard MP® incorporates our state-of-the-art lamination technology to create a microporous garment with a superior particle and liquid splash barrier.

The latest line of quality garments delivers protection and comfort through a strong and durable fabric that's designed for worker comfort. The seamless shoulder area provides significantly more room to freely move the arms and shoulders without ripping or tearing fabric. The elastic back stretches for more comfort and tear-resistance – no need to purchase a larger size just to have more fabric in the back. A gusseted, reinforced crotch provides more room to bend, crouch, and move in all directions without ripping or tearing.

- High Moisture Vapor Transmission rate keeps wearers cool and comfortable
- Well-designed garment provides worker comfort and a lower cost-in-use due to fewer rip-outs
- Tested for several industrial chemicals.
- Fabric passes ASTM F1670 testing for blood penetration

FOR SUPERIOR COMFORT, STRENGTH AND DURABILITY

MicroGuard CE® utilizes state-of-the-art lamination technology to combine a soft, non-woven fabric with a microporous film. This results in a fabric with a superior liquid barrier, better particulate barrier, stronger tear resistance and lower lint than other fabrics.

• Extremely low linting • High MVTR for worker comfort • Recyclable

BOUND SEAMS

A reinforced outer binding is tightly sewn to strengthen the seam and to eliminate raw edges that can generate particulates.

TUNNELIZED ELASTIC

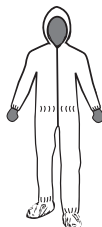

All elastic is encapsulated to eliminate raw edges that can generate particulates.

AVAILABLE GARMENTS. Each item is individually packaged.

BLOOD-BORNE PATHOGEN AND SPLASH PROTECTION

Protective apparel for blood, bloodborne pathogens, and body fluids.

ViroGuard® is comfortable to wear and offers breathability through enhanced moisture vapor transmission, while holding out particulates and many dangerous chemicals. A durable finish provides enhanced abrasion resistance to further protect workers.

- Fabric passes ASTM F1670 and F1671 tests for protection against blood and bloodborne pathogens
- Roomy, seamless shoulder area resists tears and provides more protection in key exposure areas
- A wider, gusseted crotch gives wearers more room to move in all directions without ripping fabric
- Elastic back stretches with user for more comfort and better tear resistance
- Blue color makes stains and splashes on fabric less noticeable

HIGH CONSEQUENCE INFECTIOUS DISEASE PROTECTION

ViroGuard® 2 is designed to protect healthcare workers who are providing care to a patient, with confirmed Ebola or another HCID or PUI, who is clinically unstable or has bleeding, vomiting, or diarrhea, i.e. a wet patient.

ViroGuard® 2 fabric and seams pass ASTM F1670 and F1671 testing for blood and bloodborne pathogens. The suits include six additional features developed using feedback from healthcare workers to aid in the donning and doffing process.

- Thumb & finger loops prevent sleeves from riding up
- Double-sided tape around the wrists helps keep gloves in place
- A large zipper pull with a red fabric pull tab is easier to see and use
- A mandarin collar with a Velcro closure is adjustable to create a better seal around the neck
- A zipper front with a sealable storm flap that includes a starter tab for tape is easier for a gloved hand to pull & expose the tape for sealing the storm flap
- A large, visible sizing tag helps materials management teams easily identify garment sizing when suits are removed from the box

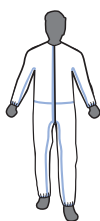

Available ViroGuard® 2 Garments

Coverall with Boots Only. Elastic Wrists. Thumb & Middle Finger Loops at Cuff. Zipper Front with Sealable Storm Flap. Double-Sided Tape at Wrists for Glove Adhesion. Mandarin Collar with Velcro Closure at Neck. Red Fabric Pull Tab on Zipper. Taped Seams.

Features developed with healthcare workers' input

Thumb & Finger Loops

Prevents sleeves
from riding up.

Double-sided tape around the wrists

Helps keep gloves in place.

Large zipper pull with red fabric pull tab

Easier to see and use.

Mandarin collar with Velcro closure

Adjustable collar creates a better
seal around the neck.

Zipper front with sealable storm flap - has starter tab for tape

Easier for a gloved hand
to pull & expose the tape
for sealing storm flap.

Visible sizing tag

Helps materials management
teams identify size easily when
suits are removed from the box.

GAMMA IRRADIATED GARMENTS WITH STERILE PROTECTION (10⁻⁶)

GammaGuard® CE offers a soft, comfortable fabric with a superior liquid barrier, low linting and strong tear resistance. All GammaGuard® CE products are manufactured in an ISO-certified facility. They are sterilized to a 10⁻⁶ Sterility Assurance Level (SAL). Sterile-Don™ packaging utilizes a special fold design that protects against potential contamination during gowning.

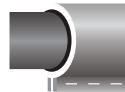

GammaGuard® CE products are made with bound seams and tunnelized elastic to strengthen the seam, provide secure closure and eliminate raw edges that may generate particulates.

- High MVTR helps wearer keep cooler vs. competitive fabrics.
- Certificate of sterility included in each case.
- All GammaGuard® CE products are individually packaged.

BOUND SEAMS

A reinforced outer binding is tightly sewn to strengthen the seam and to eliminate raw edges that can generate particulates.

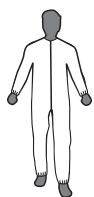

TUNNELIZED ELASTIC

All elastic is encapsulated to eliminate raw edges that can generate particulates.

What is Gamma Irradiation?

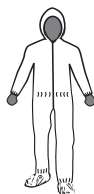

Gamma sterilization allows International Enviroguard products to achieve sterilization levels of 10⁻⁶ which is the highest level of sterility assurance. This means that for every million items sterilized, there may be one that contains a microorganism. Gamma irradiation penetrates the packaging to sterilize the garment inside. Our unique fabric withstands this sterilization process without yellowing or deteriorating the fabric. Competing sterilization methods such as EtO, use a toxic gas that often leaves an odor or may leave behind a chemical residue.

SOFT SCRUBS™

Soft Scrub™ garments are made of three-layer SMS fabric that protects against particulates, light liquid splashes, or sprays. These incredibly soft garments offer modesty with complete “no show through” coverage. Clothing can be worn as a protective undergarment beneath a sterile gown.

After each use, clothing can easily be disposed of to help reduce the spread of germs, bioburdens, and other contagions. All garments come with a convenient fabric loop for easily hanging up clothing. Possible applications include pharmaceuticals, labs, healthcare, controlled environments, and more.

About SMS Fabric

From surgical face masks to cartridge filters to safety clothing and sheets, spunbond meltblown spunbond, or SMS, is a tri-laminate, non-woven fabric commonly used in medical environments. As the name implies, it consists of three layers - a top layer, which consists of spunbond polypropylene (PP), a middle layer, which consists of meltblown PP, and a final, bottom layer that also consists of spunbond PP. Layered fabric helps make SMS strong and durable to protect against light liquid splashes and sprays, while also providing an excellent particulate barrier.

Understanding the SMS fabric layers

Spunbond PP: This layer of fabric does not use chemicals and consists of a web of spun polypropylene. It is lightweight with high air permeability and has high tear and abrasion resistance.

Meltblown PP: The middle layer of SMS consists of meltblown PP. A melted polymer is blown with hot air to stretch it to create thin microfibers or filaments. This process ensures the microfibers are randomly laid to create a nonwoven and self-bonded web as the polymer cools. The web is then compressed to create the fabric layer.

MAINTAIN WORKPLACE CLEANLINESS

Enviromat® contamination control is a multi-layered and numbered adhesive pad that removes particulates from the soles of footwear prior to entry into a clean or controlled environment. Once the top layer is soiled, it can be easily removed to expose the next clean layer.

Stop dust, dirt, and debris in its tracks. Enviromat® helps keep flooring pristine to avoid damage or added cleanup. Each tacky pad is made of adhesive layers, which capture and stop debris from spreading to other areas. With 30-layers per pad, this long-lasting tacky mat keeps worksites clean throughout lengthy or multiple projects.

Adhesive layers are easy to peel and dispose of after use.

Each layer is numbered from 1-30 to help you know when it's time for a replacement.
